Error descriptions

If you encounter a problem, consider [enabling logging](#) and reviewing the logs. If you can't resolve the issue on [contact support](#) and attach the logs exported using the following command:

```
adb logcat -v time >> ${PATH_TO_FILE}
```

The following sections describe common errors that you might encounter while working with the AppMetrica SDK on An

The number of sessions does not increase

Check your session tracking settings. For more information, see [Tracking user activity](#).

No events in the report

1. Perform a minimum of 10 app actions that trigger the event sending.
It's necessary because AppMetrica accumulates events in the buffer and sends to the server in several parts.
2. Wait for 10 minutes and check the report. Reports don't display events immediately.

Error adding a library to a project

```
UNEXPECTED TOP-LEVEL EXCEPTION:
com.android.dex.DexIndexOverflowException: method ID not in [0, 0xffff]: 65536
at com.android.dx.merge.DexMerger$6.updateIndex(DexMerger.java:502)
at com.android.dx.merge.DexMerger.mergeMethodIds(DexMerger.java:491)
at com.android.dx.merge.DexMerger$IdMerger.mergeSorted(DexMerger.java:277)
at com.android.dx.command.dexer.Main.runMonoDex(Main.java:303)
at com.android.dx.command.dexer.Main.mergeLibraryDexBuffers(Main.java:454)
at com.android.dx.merge.DexMerger.mergeDexes(DexMerger.java:168)
at com.android.dx.merge.DexMerger.merge(DexMerger.java:189)
at com.android.dx.command.dexer.Main.run(Main.java:246)
at com.android.dx.command.dexer.Main.main(Main.java:215)
at com.android.dx.command.Main.main(Main.java:106)
```

This error indicates that the method limit was exceeded at the DexIndexOverflowException stage of processing. We recommend reviewing the libraries used — perhaps they are very heavy. If they can't be replaced with lightweight alternatives, you can use [multiple DEX files](#). This might increase the app loading time.

Invalid duration of user session at manual tracking

If the [manual tracking](#) of the user session is incorrectly implemented, it may lead to an inaccurate determination of its du

If the user session duration data look invalid, make sure the `AppMetrica.pauseSession()` method is always called when session ends. If this method is not called, the library considers that the session is active and commits regular data exchange server part of AppMetrica.

We recommend checking the duration of the session timeout. It is set by the `withSessionTimeout()` method. The time interval during which the session will be considered active even after the application is closed.

High power consumption by the AppMetrica library

If the library is consuming too much power, make sure you always call the `AppMetrica.pauseSession()` method when session ends. If this method is not called, the library considers that the session is active and commits regular data exchange server part of AppMetrica.

We recommend checking the duration of the session timeout. It is set by the `withSessionTimeout()` method. The time interval during which the session will be considered active even after the application is closed.

Code conflict when using automatic collection of Ad Revenue data for Fy

Automatic collection of Ad Revenue data for Fyber is not supported and causes a conflict in the code for versions `6.4.0`.

If you call the `Interstitial.setInterstitialListener` method in your app, exclude the `io.appmetrica.analytics:analytics-ad-revenue-fyber-v3` module from the list of dependencies to avoid the c

My problem is not listed

If your problem is not listed, contact [support service](#). Specify the following:

1. The source code snippet that shows the SDK integration to your app.
2. Application ID in the AppMetrica web interface.
3. Device ID.

How to get the Google AID

4. Device model and manufacturer, platform and OS version, AppMetrica SDK version.

If you didn't find the answer you were looking for, you can use the feedback form to submit your question. Please describe your problem in as much detail as possible. Attach a screenshot if possible.
